

## **Task 7: Identify and Remove Suspicious Browser Extension.**

### **1. Open Extensions Page**

In Chrome, go to `chrome://extensions/` or Menu → More tools → Extensions.

### **2. Enable Developer Mode**

Top-right toggle to see IDs and details.

### **3. Review Each Extension**

Check name, developer, permissions, version, and reviews.

### **4. Identify Suspicious or Unused**

Look for unknown, high-permission, or low-rated extensions.

### **5. Disable for Testing**

Toggle off and check if performance improves.

### **6. Remove Unwanted Extensions**

Click “Remove” and confirm.

### **7. Restart Chrome**

Type `chrome://restart` or relaunch.

### **8. Check Performance**

Use Chrome Task Manager (Shift+Esc) to verify improvements.

### **9. Be Aware of Malicious Risks**

Can steal data, inject ads, redirect pages, or mine crypto.

### **10. Maintain Best Practices**

Keep minimal trusted extensions, review monthly, and update Chrome.
