

Elevate Labs Task 4:

➔ Setup and Use a Firewall on Windows/Linux

Step 1: Enable Telnet Client in Windows

Open Run → type Optional Features → press Enter.

Enable Telnet Client checkbox.

Click OK and wait for installation.

Step 2: Open Windows Firewall

Press **Windows + R** → type **wf.msc** → Enter.

Windows Defender Firewall with Advanced Security window opens.

Step 3: Add Firewall Rule to Block Port 23

Click on Inbound Rules → New Rule...

Select Port → click Next

Choose TCP, type 23 → Next

Select Block the connection → Next

Apply to all profiles → Next.
